

Hammond **ROTO
FINISH**

DELIVERING RESULTS, RELIABILITY & ROCK SOLID DEPENDABILITY.

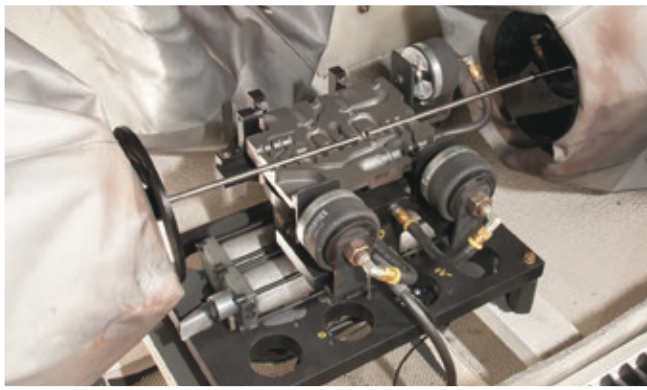

FEATURES

Recipro-Blast® is a unique blast system which can:

- Remove scale from internal passage ways or recessed areas
- Clean core residue
- Remove flash and burrs
- Work where converging holes are present
- Concentrate the blast stream in cross holes (programmable)
- Be fully automated

– *Patented U.S. 7,063,593*

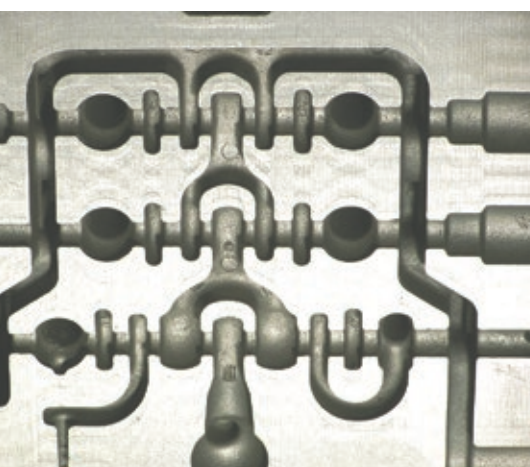

RECIPRO-BLAST®

The **Recipro-Blast®** System creates a 360° blast cloud within a confined space. This can be done with different nozzle configurations, or with opposing or converging nozzles. The blast media erupts into a cloud which then cleans, descales, or peens the surrounding area.

Castings as well as machined parts with critical surfaces can be cleaned or de-burred using the **Recipro-Blast®** system.

A wide range of applications, and part configurations can be processed with several choices of blast media or shot, and varied pressure.

Showing "cleaned" pathways.
